

FlyInspector

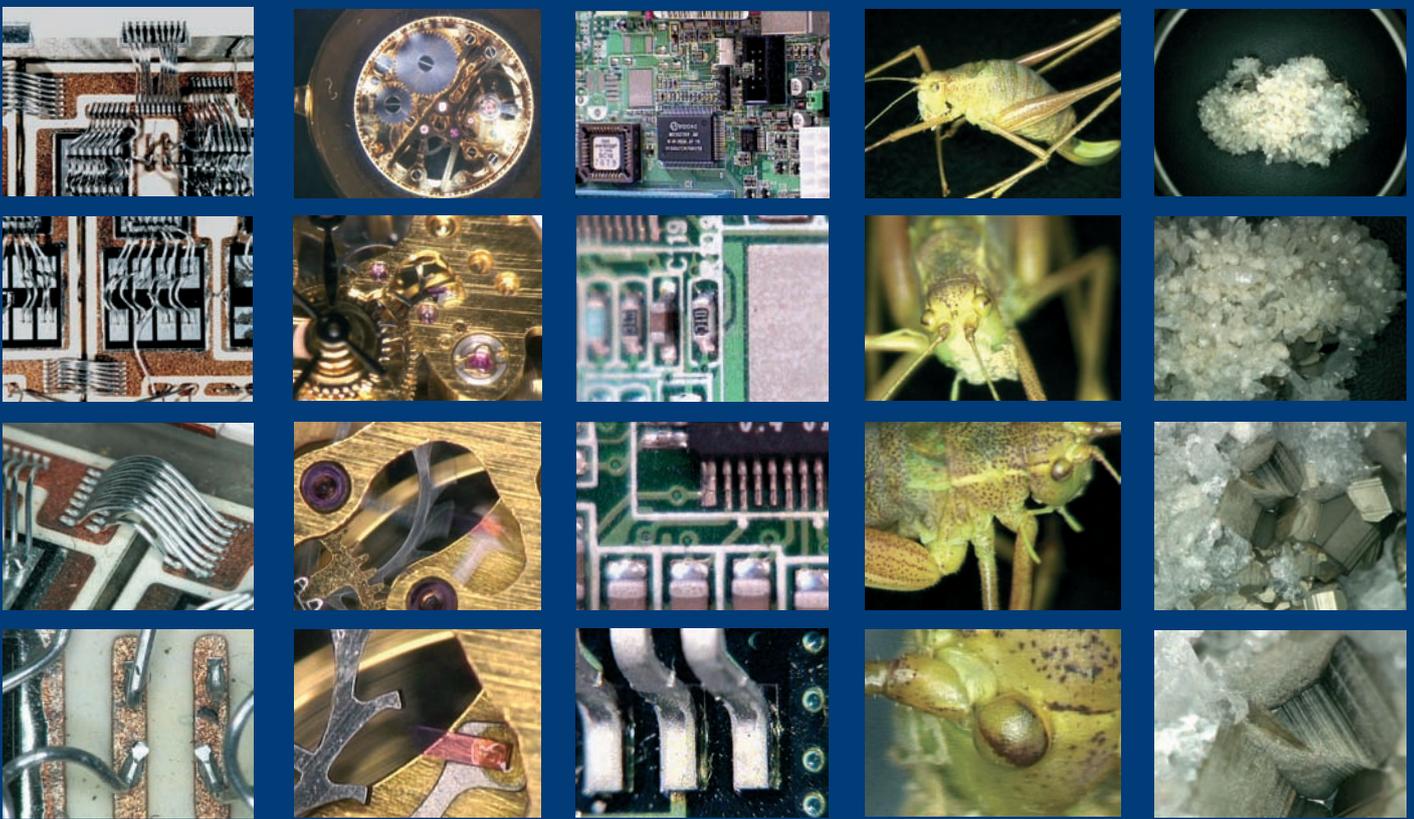

Autofocus video microscope

TechnoLab
qualifying and testing solutions

Easy optical inspection with a magnification of up to 450x

Patent pending

The FlyInspector is a PC-independent system for the optical inspection and consists of a high-resolution CCD-autofocus camera mounted on a self-balancing arm.

The user's eyes do not risk overstraining any more, because he looks at the inspection objects on a large screen instead of constantly peeping through an ocular. The screen may be installed above or by the side of the working field and delivers an excellent image with its 24 mio. colors.

The autofocus sensor makes focusing superfluous; the user simply zooms in or out.

Thanks to the double radius and the ball-and-socket-joint at the camera, objects can be inspected from various sides and angles. The LED ring light mounted at the camera head provides optimal illumination of the objects.

The FlyInspector is the ideal tool for the optical inspection in any field of application.

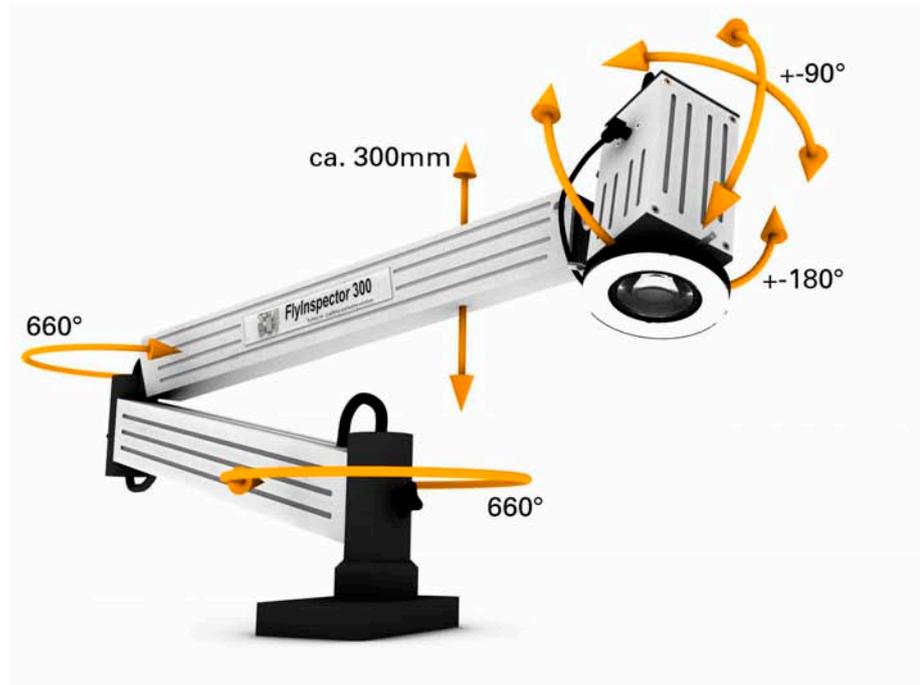

The FlyInspector HD shows images in full HD resolution with 30fps and 2 million pixels on a respective screen. When used with a suitable frame-grabber supporting this format, the images can be saved with the IMXpro software.

The IMXpro software developed by TechnoLab permits saving, editing and measuring images on a PC or notebook. As an option, images can also be stored directly on a USB stick without using a PC.

FlyInspector

- self-sustaining system, PC-independent
- compact design, small dimensions, lightweight
- easy handling
- ergonomic working posture
- positioning system with patent pending
- large working distance
- laser pointer for distance measurement / focusing

Characteristics

- autofocus camera with multiple positioning angles
- magnification of up to 450x, 25x zoom
- self-balancing arm remains in any position chosen without the need of a locking brake
- illumination and laser pointer included
- remote control
- for use with high-resolution TFT displays
- HD resolution with 1920x1080 pixels

can be upgraded with:

- PC-independent image memory box
- software
- double polarization filter

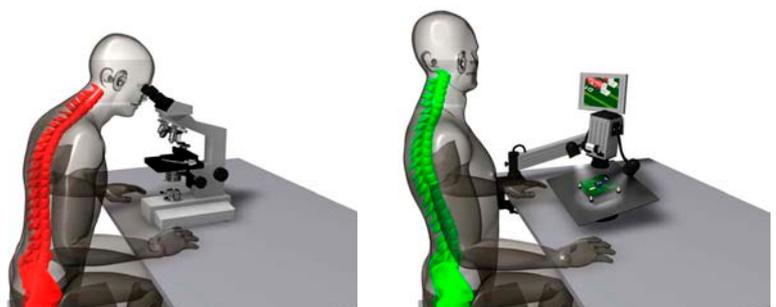

FlyInspector showing the outcome of soldering

Application

- prototyping, manual rework, micro-assembly and inspection in automotive industry, aviation and medical engineering, mechanical workshops, etc.
- quality assurance, production, defect analysis, etc.
- for universal use in: electronics industry, mechanical engineering, textile and paper industry, forensic pathology, etc.

Ergonomic advantages

- relaxed working position thanks to upright posture
- unlimited freedom of head movements
- straight view prevents strain on eyes
- images with strong depth of field help take strain from eyes
- hygienic through contact-free use
- no handling disadvantages for spectacle wearers
- remote control relieves strain on hands
- easy handling of FlyInspector with remote control

Technical specifications

degree of protection	IP40
dimension (W x L x H)	see drawing below
weight	11500g
protection class 3	DIN EN 61140, VDE 0140-1
ambient temperature	max.45°C
supply voltage	12V = (power supply included)
power input	1500mA max.
connection	YPbPr (HD), Y/C (PAL) RS 232
camera	1-chip CCD with digital signal processor for image optimization controllable via RS 232
horizontal resolution (lines TV)	HD 1080, PAL>470
camera resolution (pixels)	HD 1920 x 1080, PAL 768 x 576
depth of shade	24 bit RGB
video signal	component YPbPr (1080i) composite 1.0 Vpp, (PAL)

magnification	up to 450x (for 24" screen, HD) 50x (for 8.4" screen, PAL)
zoom factor	12x optical and 12x digital

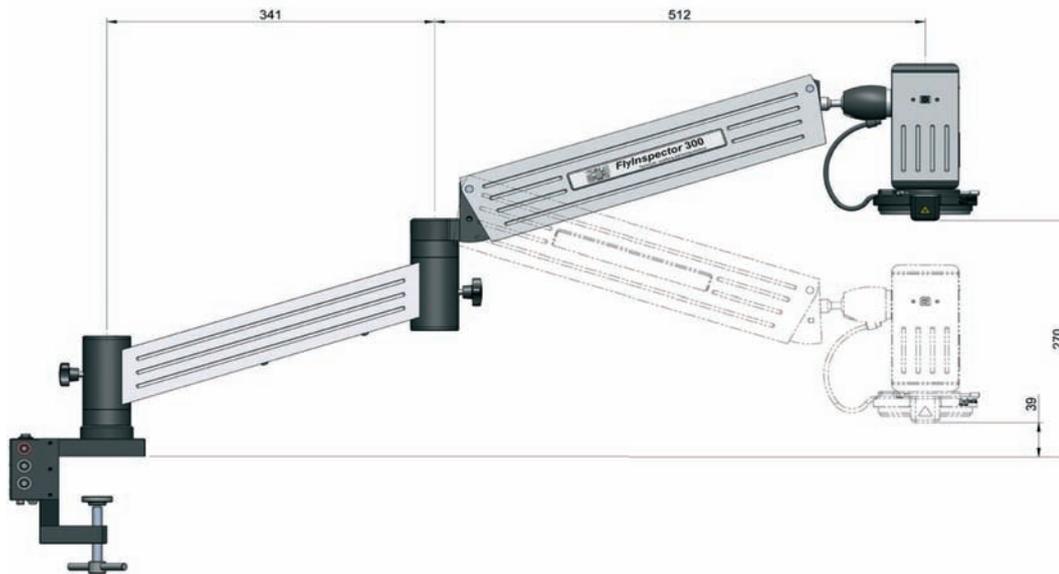

working distance	depends on lens:	
standard	min.focus area	focal distance
optional	28 mm	186 mm
	12 mm	114 mm
	7 mm	87 mm

The FlyInspector is supplied with:

basic device	self-balancing arm with autofocus camera
power supply	12V=/ 110-230V~
illumination	LED ring light with double laser pointer
remote control	for: zoom, focus, white balance, laser pointer
types available	HD, 2M pixels, 1080i PAL, 500k pixels, 576i
optional	screen 8-47" framegrabber with PCIe connection for PC installation (HD) framegrabber with USB 2.0 port to PC (PAL) PC-independent image memory box for USB sticks
	ball turn table mechanical XY-table double polarization filter for ring light
	IMXpro software for image storage, measuring and control of focus and zoom for generating images with indefinite depth of field (image merging)

comparison:

HD (1920x1080)
PAL (768x576)
